Virtual conferencing a hit with users (U)

(U//FOUO) Collaboration! Collaboration! Collaboration! The call is coming in from everywhere as the need to form better partnerships, closer working relationships, and more effective information sharing has become critical to the success of the Intelligence Community's (IC) many missions. One of the many tools currently available to our workforce that can greatly enhance the ability to collaborate with team members, partners, and customers is InfoWorkSpace or IWS.

(U//FOUO) In a nutshell, IWS is a software suite that allows a user to enter into collaborative sessions with other analysts from the desktop. The tool consists of a virtual structure of Buildings/Floors/Rooms for conducting these sessions. It encompasses both **chat and voice** and in the future may include video. **Text tools, whiteboards, file cabinets, threaded discussions, shared view capabilities, and a voting tool are available.**

(C) Currently IWS is the IC collaborative tool of choice and is widely used on JWICS and SIPRNET. The IWS suite at NSA consists of three servers supporting a wide range of Communities of Interest (COI):

- The DRAWMIND server supports COI's at the **TS//SI//TK Five-Eyes level**,
- the VOTEDOOR Server supports COI's at the **TS//SI Five-Eyes** level and
- the recently added SKYFORGE sever currently supports COI's at the **TS//SI Five Eyes** level with the additional capability of hosting access from **JWICS**.

(C) Access to the JWICS suite of IWS servers and the IC IWS server from NSANet is available. There are over 3500 persons within the NSA community with IWS accounts across the various servers with over 1000 participating in active collaborative sessions.

(S//SI) Here are a few comments from IWS users attesting to its usefulness in fostering good collaboration.

- From the group that supported the Summer Olympics: "IWS is proving a seamless tool for coordinating security activities."
- From a new user: "I'm sold! IWS is the greatest thing since sliced bread. With a basic knowledge of the capabilities, it's pretty intuitive (and that's coming from an IT dinosaur like me), so don't think it will present too much of a learning curve. Features like on-line chat (speaking as well as typing), document viewing and modification, and conference room (to view PowerPoint, etc.) will make our communication much easier."
- From a session conducted on JWICS: (Session included participants from NSA, DIA, Southcom, Stratcom, and Northcom. "Several of the participants made a point to say this was far and away the best JCE/IWS session the group has ever had. We were at no point stymied by technical problems and as far as I could tell all the features we used -- text messaging, audio, bulletin board, shared view -- worked normally. I think this experience went a long way toward changing some folks' minds about JCE/IWS virtual conferencing.... a good thing!"
- And this comment from an "outsider" trying to get in: "(We) miss out on a tremendous amount of information by not being up on NSA-net, specifically, an IWS community room called "the woodshed (multi-int tipping)" where representatives of the 5-eyes community

(USA, AUS, CAN, GBR and NZL) agencies share information. It has progressed beyond just "copy and paste" of reporting to a collaborative environment where members discuss collection strategies and analytical judgments (and) where new ideas and information exchange are encouraged. This is a dramatic shift from the zircon and mIRC chat that (we) currently use on JWICS, where the old information ownership model dominates..."

(U//FOUO) IWS is on the [NES baseline](#) and information on how to get access to this tool, establish an account and apply for training can be found at "go iws". Additional information can be found at "go sidcollaboration".

(U//FOUO) Many people -- including the 5-EYES SIGINT Directors -- use IWS to collaborate. See [related story](#).

"(U//FOUO) SIDtoday articles may not be republished or reposted outside NSANet without the consent of S0121 ([DL sid comms](#))."
