(U//FOUO) D&D Awareness at NSA

FROM: ███████████████

SID Intelligence Security Issues (S02L3)

Run Date: 07/13/2004

(U//FOUO) On Thursday 8 July, Dr. Larry Gershwin, NIO for Intelligence Assurance and Chairman of the DCI Foreign Denial & Deception Committee (FDDC), presented an Executive Denial & Deception Overview briefing in the Friedman Auditorium and received a SID coin from SID Chief of Staff Charles Berlin at the meeting's close.

(S) Critique comments from Dr. Gershwin's presentation reiterated the importance of D&D in daily analysis and stressed that D&D training should be provided to even the most junior analysts. To increase NSA's D&D awareness, **several classes are available** to analysts to enhance their D&D skills. Please look for the following D&D offerings through the National Cryptologic School:

- DENL 1011 - D&D Awareness Training (3 hrs.)
- DENL 2111 - Adversarial D&D Analysis Course (40 hrs.)
- DENL 3211 - Special Topics in D&D (4 hr. seminars)

(S) To further increase D&D awareness, we have made **NSA's Countering D&D Implementation Plan** available on S02L3's Denial & Deception web page. If you are interested in accessing it, the plan is posted on the web at: ████████████████████████████ ████████████ and can be found under "Denial and Deception Plan" 2004 with the yellow key. Because the document is currently only available in its NOFORN version, it is password protected. Anyone requiring access must implement a process setting a password to retrieve the document.

(S) To obtain a password, double click on "Request password for viewing NOFORN version of D&D Plan". You will be required to submit information confirming your access request that will take about 24 hours to process. Once this screen is submitted, you will be forwarded to another screen to select your new password. Use this new password to access the D&D Implementation Plan after you receive e-mail access confirmation. If you still are unable to access the document, please call ████████████ for assistance.

(S) Please look over this Implementation Plan and see where you and your organization fit in and can make a contribution. With your help, we can ensure that NSA not only protects its SIGINT assets but can also counter any adversarial D&D attempt.
